

Paul

Downloading the videos, i've made this as simple as possible.

Choose the video you want to download.

This will open up a new tab.

Right click on the video and choose save video as, save the video to your PC or MAC.

When you switch to facebook, choose photo or video.

Then you want to find the downloaded video, in this case it's going to be speed keto ---> open, that will then upload the video.

While its uploading, you want to put in your affiliate link.

Once that's posted, click on post, facebook will now process the video, shouldn't take long.

Once that is done, you'll get a notification from facebook saying the video has been processed.

You'll see the video here and whatever text you want to put with your affiliate link.

Dead simple.
